

Management Information System (MIS) - PMIT-6108

Detailed Answers for Test Questions

Test-1: Section A

Q1(a) Characteristics of Good Information

Good information should be **accurate**, **relevant**, and **timely**. Accuracy means free from errors; relevance implies it must serve the intended decision-making purpose; timeliness ensures information is available when needed, without delays.

Q1(b) Architecture of Typical MIS Infrastructure

A typical MIS infrastructure includes:

- **Hardware:** Computers, servers, networking devices
- **Software:** Operating systems, database management systems, application software
- **Data:** Organized storage in databases and data warehouses
- **Network:** Communication systems for data exchange
- **Procedures:** Rules and protocols for data processing and system use

Q1(c) Manual vs Computerized Information Systems

Feature	Manual Information System	Computerized Information System
Processing Speed	Slow, manual input	Fast, automated processing
Accuracy	Error-prone	High accuracy via validations
Data Storage	Physical files and folders	Digital databases
Accessibility	Limited to physical location	Remote and multiple access

Q2(a) Key Features of Value Chain Model

- Focus on primary activities (inbound logistics, operations, outbound logistics, marketing, and service)
- Support activities (infrastructure, HR, technology development, procurement)
- Creation of competitive advantage through cost reduction or differentiation

Q2(b) System Software vs Application Software

Aspect	System Software	Application Software
Purpose	Manages hardware and resources	Performs user-specific tasks
Examples	Operating system, utilities	Word processors, browsers
Dependency	Essential for system operations	Depends on system software

Q2(c) Pyramid Diagram: Structured, Semi-structured, and Unstructured Problems

- **Structured problems:** Managed by Transaction Processing Systems (TPS)
- **Semi-structured problems:** Managed by Management Information Systems (MIS)
- **Unstructured problems:** Managed by Decision Support Systems (DSS)

Q3(a) Inbound and Outbound Logistics Activities

- **Inbound:** Receiving, warehousing, inventory control
- **Outbound:** Order processing, distribution, delivery

Q3(b) Value Chain Representation

Value chain links primary and support activities forming the process of creating product/service value from raw input to customer delivery.

Q3(c) TPS activities in bKash

- Processing money transfers and payments
- Updating account balances
- Authorization and validation of transactions

- Recording transaction details
-

Test-1: Section B

Q1(a) Definition and Necessity of MIS

MIS is an integrated user-machine system for providing information to support operations, management, and decision-making in an organization. It is necessary to improve efficiency, support control and planning, and facilitate communication.

Q1(b) MIS Components, Hierarchy, and Types

- Components: Hardware, software, databases, procedures, people
- Hierarchy: Operational Level (TPS), Middle Management (MIS), Executive Level (DSS, ESS)
- Types: TPS, MIS, DSS, Executive Support Systems (ESS)

Q1(c) Advantages and Disadvantages of Computerized Systems

Advantages	Disadvantages
Speed and efficiency	High initial cost
Data accuracy and integrity	Dependency on technology
Easy data access and storage	Requires technical expertise
Enhanced decision support	Security risks

Q2(a) Importance of Competitive Advantage

Competitive advantage allows a business to outperform rivals, leading to profitability and growth. Methods include cost leadership, product differentiation, innovation, and strong customer relationships.

Q2(b) Pyramid Diagram: Levels and Management Type

- Structured problems ↔ Operational Management
- Semi-structured problems ↔ Tactical Management
- Unstructured problems ↔ Strategic Management

Q3(c) TPS activities in Facebook

- User authentication/login
 - Content posting and sharing
 - Messaging and notifications handling
 - Ad targeting and tracking
-

Test-2: Section B

Q1(a) Systems Development Life Cycle (SDLC)

Phases:

1. Planning
2. Analysis
3. Design
4. Implementation
5. Testing
6. Maintenance

Q1(b) System Conversion Strategies

- Parallel Conversion
- Direct Cutover
- Phased Conversion
- Pilot Conversion

Q1(c) JAD Model Advantages and Disadvantages

Advantages: Faster communication and requirement gathering.

Disadvantages: Costly and expensive in facilitator skills.

Q2(a) Agile Methodology

An iterative and incremental project management system prioritizing flexibility and customer feedback.

Q2(b) Characteristics of TPS

Handles large volumes of repetitive transactions reliably and accurately, supporting daily operations.

Q2(c) Agile vs Waterfall Models

Aspect	Agile	Waterfall
Development	Iterative and flexible	Linear and sequential
Feedback	Continuous	End phase
Change Adapt.	Easy	Difficult after start

Q3(a) E-Commerce Business Models

- B2B
- B2C
- C2C
- C2B

Q3(b) Traditional Commerce vs E-Commerce

Aspect	Traditional Commerce	E-Commerce
Location	Physical stores	Online platforms
Availability	Limited hours	24/7
Costs	High overhead	Lower operational cost
Reach	Limited to local markets	Global access

Test-2: Section A

Q1(a) System Definition and Approaches

System: A set of components working together to achieve a goal. Approaches include Mechanical, Biological, Social, Cybernetic.

Q1(b) Critical Feasibility Factors in SDLC

- Technical feasibility
- Economic feasibility
- Operational feasibility
- Schedule feasibility
- Legal feasibility

Q1(c) RAD Model Advantages and Disadvantages

Rapid development with user involvement but requires highly skilled users and less suitable for complex systems.

Q2(a) Kanban and Scrum Comparison

Aspect	Scrum	Kanban
Workflow	Time boxed sprints	Continuous workflow
Roles	Defined roles (Scrum Master etc.)	No formal roles defined
Flexibility	Less during sprint	High flexibility

Q2(b) TPS Advantages and Disadvantages

Advantages: Reliable, efficient; Disadvantages: Costs and maintenance complexity.

Q3(a) Electronic Payment System and Modes

Digital systems for transferring money: credit/debit cards, e-wallets, mobile payments, online banking.

Q3(b) E-Commerce Pros and Cons

Pros: Convenience, broader reach; Cons: Security risks, technical issues.
